

| CAT. NO. | METAL | DISTAL RADIUS NAILS (DRN) |
|----------|-------|------------------------------|
| 662.440 | TT | Distal Radius Nails (4.5 mm) |

Specification

- Available in Titanium.

Indication for use

- Fractures of the distal radius receive surgical treatment in more and more cases since the conservative therapy is characterized by a high rate of secondary dislocation after the primarily successful closed reposition of the fracture. DRN is recommended for extra-articular or undisplaced fracture of distal radius.
