

LCP MANDIBLE SUBCONDYLAR LAMBDA PLATE, 7 HOLES, MALLEABLE

CAT NO.	LCP MANDIBLE SUBCONDYLAR LAMBDA PLATE, 7 HOLES, MALLEABLE
708.118R	LCP MANDIBLE Subcondylar Lambda Plate, right, 7 holes, malleable, Thickness 1.0 MM
708.118L	LCP MANDIBLE Subcondylar Lambda Plate, left, 7 holes, malleable, Thickness 1.0 MM

Specification

- Plate is available in Titanium.

Indication for use

- The LCP Mandible Subcondylar Lambda Plate (7 holes, malleable) is specifically designed for the internal fixation of Subcondylar and condylar neck fractures. Its unique shape allows it to emulate a two-plate technique, providing enhanced stability in the narrow Subcondylar region. The malleability facilitates anatomical adaptation, ensuring optimal stabilization during the healing process.
